

Overview

Spectrum Aeromed is a leading designer and provider of customized air medical and ambulance equipment.

The company works closely with air medical and transport crews to equip all types of fixed and rotor wing aircraft with highly-specialized and innovative life support solutions. When minutes count and lives are at risk, Spectrum's durable and dependable equipment gives medical responders and flight crew unparalleled performance and responsiveness – every time.

For more than 15 years, aircraft operators from around the world have specifically reached out to Spectrum Aeromed, located at the Hector International Airport in Fargo, N.D. since June 2008, to solve the aviation industry's most complicated projects and reconfiguration needs. In the private sector, Spectrum's services provide owners with more than interchangeable medical equipment but also the chance to increase the productivity and resale value of an aircraft.

Key Products / Services

- Spectrum Aeromed has a strong niche in customized work with up to 75 percent of its orders requiring some type of technical or aesthetic customization.
- Spectrum's unique **Quick Change Modules** enable flight crew to have readily available life support solutions at a moment's notice.
- The industry-recognized and Spectrum-patented **Seat Rail Adapter** allows any aircraft to be converted from standard to air ambulance configuration in less than 30 minutes.
- Exclusively designed by Spectrum, the newly introduced **Medwall** provides air ambulance crew with limitless options for mounting auxiliary medical equipment.
- Known as the "**short box**," Spectrum Aeromed's flexible modular stretcher (**20/2000 Series**) contains all the components for critical care transport in compact form. It's designed for aircraft with limited cabin space and single- or multiple-patient transport needs.
- **52/5200 Dual-Dedicated Systems** allow for tandem end-to-end or tandem side-by-side configurations for easy installation and customized interiors.
- For larger executive-style aircraft, Spectrum's **55/5500 Executive EMS Medical Interior** is custom-built for specific auxiliary medical equipment and provides significant comfort for long-distance flights.

- The **Articulating Stretcher** is one of Spectrum's highly-innovative and functional rotor designs. The lightweight deck provides one-hand movement for patients up to 400 pounds and the full-pivot stretcher eliminates the need for heavy lifting.
- The long-standing, original **2800 Series** is an extremely versatile air medical module for small and large aircraft.

Company History and Quick Facts

- Founded in 1991 in Wheaton, Minn. and currently based in Fargo, N.D.
